## Sector 04BUIL: Construction work

---

**Sector :** 04BUIL **Registration Date :** 2024-05-28  
**Organization :** UNI  
**Country :** Italy  
**Project ID :** 01613932/0001 **Project**  
**Established**  
**ICS :** 23.040.20, 23.040.45,  
91.140.60, 93.025  
**National Ref :** UNI1613932  
**Title :** Poly(vinyl chloride) high impact resistance (PVC-HI) piping systems for the transport of fluids under pressure  
**Scope :** This technical specification specifies the characteristics of thermoformed pipe and pipe fittings (e.g. bends and sleeves) made of Polyvinyl chloride polymer alloy in PVC-HI (including PVC-M, PVC-A, PVC-CPE) for use in the pressure fluid transport sector with diameters from 50 mm to 800 mm.  
This document applies to:  
- pipes with smooth internal and external surface  
- socket pipes with bonded joints  
- socket pipes with sealing elements  
- thermoformed fittings from pipes with the same joining systems  
Elastomeric sealing elements shall comply with the requirements of the applicable EN 681 series.  
The pipe system may be used for the supply of water under pressure for human consumption and general purposes and also for waste water under pressure in the following configurations  
a) main pipelines and underground branches;  
b) above-ground water conveyance both outside and inside buildings;  
c) underground drains and pressure sewers.  
This document is applicable to pipelines for the conveyance of water up to and including 40 °C.

enquiry**ICS :****National Ref :** PNE 92195-1**Title :** Thermal insulation products. Insulating lightweight sandwich panels with at least one non-metallic face. Part 1: Self-supporting sandwich panels.**Scope :** This standard establishes the specifications and test methods for self-supporting lightweight insulating sandwich panels with a core of insulating material and double covering (at least one of them non-metallic), being the insulating core a thermal insulating product or products included in any of the Standards UNE-EN 13162 to UNE-EN 13171, both inclusive. This standard applies to self-supporting insulating sandwich panels intended for the construction of roofs, facades, floor slabs, horizontal and vertical interior partitions of buildings.

This standard does not specify the necessary level that a certain property of the product must reach in order to demonstrate its suitability for a particular application.

Sandwich panels with two metallic faces whose specifications and test methods are included in the Standard UNE-EN 14509, or in the future Standard UNE 92195-2 "Thermal insulation products. Lightweight insulating sandwich panels with at least one non-metallic face. Part 2: Load-bearing" .

## Sector 13FIRF: Fire-fight equipment

<b>Sector :</b>	13FIRF	<b>Registration Date :</b>	2024-05-23
<b>Organization :</b>	ASI		
<b>Country :</b>	Austria		
<b>Project ID :</b>	01000236/0001	<b>Project</b>	Established
<b>ICS :</b>	13.220.99		
<b>National Ref :</b>	ÖNORM EN 12101-13/A		
<b>Title :</b>	Smoke and heat control systems - Part 13: Pressure differential systems (PDS) - Design and calculation methods, installation, acceptance testing, routine testing and maintenance (National Amendment)		
<b>Scope :</b>	<p>This document gives calculation methods, guidance and requirements for the design, installation, acceptance testing, routine testing and maintenance for pressure differential systems (PDS).</p> <p>PDSs are designed to hold back smoke at a leaky physical barrier in a building, such as a door (either open or closed) or other similarly restricted openings and to keep tenable conditions in escape and access routes depending on the application.</p> <p>It covers systems intended to protect means of escape e.g. staircases, corridors, lobbies, as well as systems intended to provide a protected firefighting space (bridgehead) for the fire services.</p> <p>It provides details on the critical features and relevant procedures for the installation. It describes the commissioning procedures and acceptance testing criteria required to confirm that the calculated design is achieved in the building.</p> <p>This document gives rules, requirements and procedures to design PDS for buildings up to 60 m.</p> <p>For buildings taller than 60 m the same requirements are given (e.g. Table 1), but additional methods of calculation and verification are necessary. Requirements for such methods and verification are given in Annex D, but the methods fall outside the scope of this document [e.g. Additional mathematical analysis and/or Computational Fluid Dynamics (CFD)].</p> <p>Routine testing and maintenance requirements are also defined in this document. In the absence of national requirements and under expected ambient and outside conditions, the requirements in Table 1 are fulfilled by the PDS.</p>

<b>National Ref :</b>	ÖNORM EN 12101-6/A		
<b>Title :</b>	Smoke and heat control systems - Part 6: Specification for pressure differential systems - Kits (National Amendment)		
<b>Scope :</b>	<p>This document applies to pressure differential system kits and components, positioned on the market and intended to operate as part of a pressure differential system. The purpose of a pressure differential system is to prevent protected spaces from smoke spread by using pressure difference and airflow. This document specifies characteristics and test methods for components and kits for pressure differential systems to produce and control the required pressure differential and airflow between protected and unprotected space.</p>
